You are in London in the year 2513. There is a rat plague and the rats have an infectious disease that are killing millions of people. You are a secret scientist that have all the equipments you need. You need to find out what is the disease, how to cure it, if it is a virus or a bacteria, and then terminate it. You have to stop this disease, you have to stop the killing.

**Tasks**

Have you ever wondered what is taking over your body when you are sick? Most times, you will hear the terms flu, or cough, or bacteria. Well flu are actually types of viruses. Now bacterias and viruses are different in many ways, but also very similar. This webquest will help you understand bacterias and viruses better and hopefully, make you understand the differences and the similarities in them. You will understand1. What a virus is2. What a bacteria is3. How does a virus work4. How does a bacteria work5. Multiple examples of viruses6. Multiple examples of bacteria
