### Introduction

Welcome to the Spanish Climate and landscapes: In this activity we will have the opportunity to know a little bit more about the big differences that we can find in Spain, not only in its climate but in its landscapes and vegetation. For example, in the maritime climate you will find short rivers with high, regular flow. The relief it will be with several mountain systems and deciduous forests, moors and grasslands. Animals as deer, capercaillies, fallow deer, wolves, etc. Mediterranean coastal is located in south and east of the Peninsula and Balearic Islands. Relief is mountainous, except for the coastal plains and the Guadalquivir Depression, rivers are short and irregular. The fauna is very impressive as golden eagles, peregrine falcons and wild cats. Mediterranean inland has a varied relief, plain are predominant on the Meseta and in the Ebro Depression. The rivers flow &nbsp;irregular. You can see wild pigs, partridges and eagles as well. Sub-tropical &nbsp; climate is located in Canary Islands with a mountainous and volcanic origin, no rivers but only streams. You will be able to visit Laurisilva forest, Bolle's laurel pigeon and El Hierro giant lizards, etc. And last, Alpine climate is located in mountain areas, as in Pyrenees, the Sistemas Béticos and the Cordillera Cantábrica. The vegetation grows at different levels and you will find different types of vultures, ibex, etc.

### Tasks

Look for information about three Spanish national parks. You have to create a document where you will explain: Name of the National Park, Location, Regarding its location you have to talk about which type of climate does it have, What is its main typical relief, Which kind of vegetation can we find on there, And which kind of fauna.
