Introduction

You have just won \$100,000!! CONGRATULATIONS! What are you going to do with this money? You can invest it to make more money or just stick it in the bank. It is up to you but remember, these are big decisions because you could lose it all or you can make hundreds!

Good luck investing

Tasks

you have to invest this money in 4 different stock shares!! you will need to develop a strategy to know which stock to invest in or not, some stocks are good and other will make you lose tremendous amounts. develop a statistical analysis to show how you can differentiate one stock from the other . show how each stock progresses and develops over a period of 4 years . You should research your options and pick the best stock available !!!

Process

This project is done on an individual basis, not group or team is required to achieve the stated objectives .

task number 1 requires you to invest your money in four stocks -- here is the process = there are two ways to invest money in stocks either by going to the bank or by choosing a market you want to trade in for example in lebanon if you want to buy stocks of the internet you go to www.bse.com.lb.

task number 2 requires you to develop a strategy that will allow you to know what stock to invest in . for an investor we recommend him/her to go to the following websites and check whether the stock is increasing or decreasing in value . www.bloomberg.com or www.reuters.com . these webpages have information about daily transactions that occur in the market .

task number 3 requires you to develop a statistical analysis to see how the stock is developing , for you to be able to develop the analysis , you should keep record of the value paid for the stock when you bought it till another four years ... this will enable you to see whether the value depreciated or increased . for more information please visit <http://finance.yahoo.com/?u>

task number 4 requires you to develop a financial analysis to differentiate between four stocks . in order to do so you should pile up information about what company the stock belongs to (shipping , oil , steel , etc) and to differentiate even more you can go to any of the websites below and see how each one is performing and for how much each stock is sold . ex: a stock in a metal company can cost 40 \$ today , a stock in a gold company can cost 1000\$ differentiation is very easily done among stocks
